Delkin's Slug and Snail Destroyer

Unbelievable is the manner in which this substance attracts and destroys these most difficult pests. Absolutely harmless to larger animals, this substance is sure death to slugs and snails. They are lured from their hiding place and are found dead wherever piles of the substance have been placed around on the ground.

A small quantity goes a long way. A pound of the Destroyer will clean out an average size greenhouse.

BULBOUS IRIS

As a cut flower, the Bulbous Iris has taken its place as one of the most popular and profitable items for the Greenhouse. The flowers are phenomenal keepers and shippers, blooming at a time of year when flowers are in demand at good prices.

Under glass, the Tingitana Hybrids may be brought into flower during December and January; the Dutch during February and March; and the Spanish during March and April.

For a continuation of blooms during the latter part of April, May, and the first part of June, the Dutch and Spanish may be planted in cold frames or outside.

For early forcing we recommend top size bulbs. For slower inside growing second size bulbs may be used. The smallest size bulb is suitable for cold frame or outside growing and, because of the low price, growers should find these very profitable.
